

The Digital Safety Blueprint

A step-by-step checklist for setting up parental controls
across iOS, Android, Social Media, and Gaming.

Curated from the SafeNet PH Academic Research Project (North Eastern Mindanao State University).

The Three Layers of Digital Safety

Layer 3: Interactive Gaming

Protecting real-time social play.

Layer 2: Media & Social Networks

Managing content consumption and social visibility.

Layer 1: The Device Ecosystem

Securing the hardware and app stores.

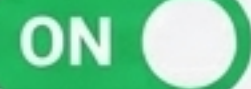

Digital protection starts at the foundational device level and works its way up to real-time interactive spaces.

Layer 1 – Securing the Device Ecosystem

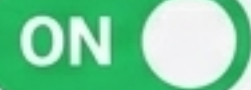

iOS (iPhone/iPad)

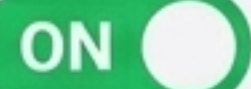

Settings > Screen Time > Turn On

Set Screen Time Passcode

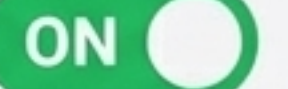

Limit Allowed Apps. Filter by age.
Set iTunes/App Store Purchases
to Don't Allow.

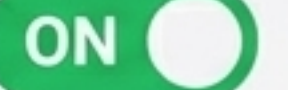

Android

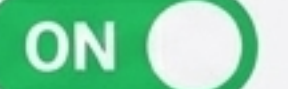

Play Store > Profile > Settings >
Family > Parental Controls

Create 4-Digit PIN

Adjust Apps & Games to specific
age groups. Set Movies & TV
restrictions based on ratings.

The Parent's Role (Mga Tip)

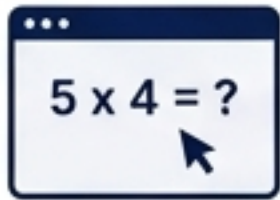

Discuss these restrictions and why they exist. Review regularly as they grow.
For Android, consider using the Family Link app for more robust control.

Layer 2 — Safe Viewing on YouTube Kids

The Tech Setup

Tap the Lock Icon in the app corner.

Solve the math problem to access settings.

Navigate to Settings > Kid's Profile

Choose your child's profile to approve specific content or set age-appropriate viewing limits.

The Parent's Role (Mga Tip)

Review their **watch history** regularly.

Use the history as a conversation starter—ask them about what they watch and why they enjoy it.

Layer 2 — Managing Social Footprints

Privacy Dial

Facebook

- ⚙️ **Path:** Settings > Privacy
- 👁️ **Visibility:** Limit who can see posts and profile info. Enable Profile & Tagging settings to manage tags.
- 💬 **Communication:** Control incoming friend requests.

TikTok

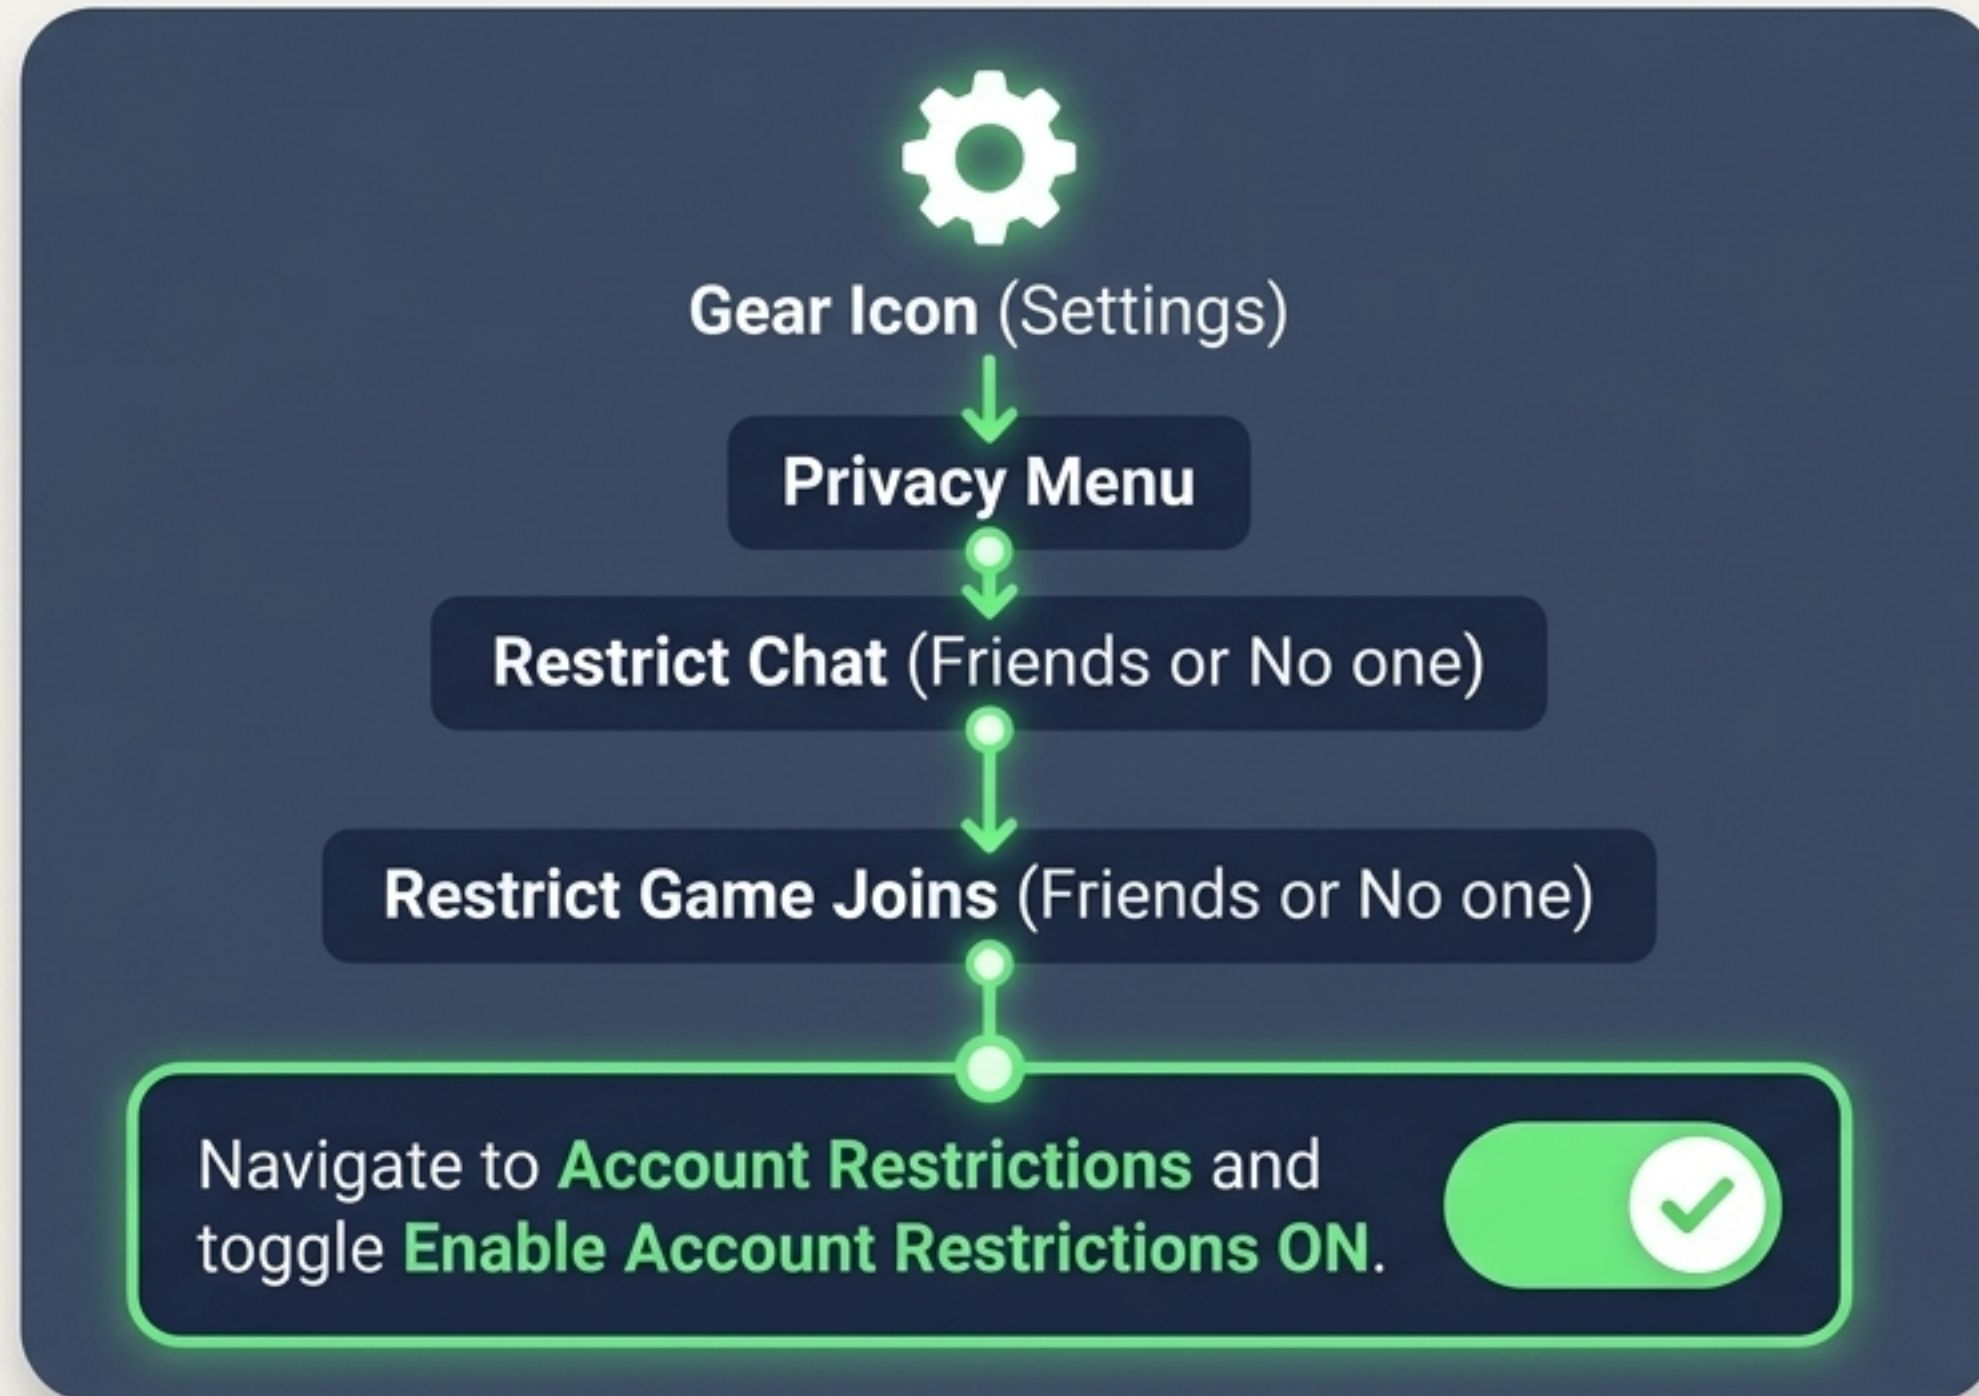

- 👤... **Path:** Profile > Three dots (top right) > Privacy and Safety
- 👁️ **Visibility:** Set account to Private.
- 💬 **Communication:** Limit direct messages to Friends or Off. Set comments to Friends or No one.

The Parent's Role (Mga Tip)

Teach the importance of keeping personal info private. Periodically review their follower/friend lists and engage with the content they are creating.

Layer 3 — Interactive Gaming (Roblox)

Co-Op Mode (Mga Tip)

Play together to understand the game mechanics and social interactions. Make sure your child knows exactly how to report inappropriate behavior.

The Tech + Talk Equation

Technical measures are only half the battle. Using parental controls is essential for managing access, but they cannot replace human guidance.

The “Talk” Checklist

- ✓ Explain why rules exist, rather than just enforcing them.
- ✓ Establish a routine of regular check-ins.
- ✓ Create a safe space for them to report strange or bad behavior without fear of losing device privileges.

The Master Safety Checklist

Protection Type	iOS	Android	YT Kids	Facebook / TikTok	Roblox
Purchase Blocking	✓	✓			
Screen Time Limits	✓	✓			
Content Filtering			✓		
Stranger Chat Blocking				✓	✓
Profile Privacy				✓	✓

Use this map to understand your layers. Device OS handles purchases and time limits. Social and Gaming apps handle communication and visibility.
